I chose to do it now as the 26% tax credit applies to the upgraded design. Doing sunlight backup requires the IQ Combiner 4 instead of the 3, the System Controller 2 which is the transformer to support 120V loads and the real brains of the operation, 2x IQ Load Controllers and the load rewiring that goes with it (to move your backup loads to the load controllers).

Off Grid. This mode should only be used for people that are installing the inverter completely without grid power. In fact, no cables should be landed in the "AC Grid" terminals of the inverter but only the "AC Backup terminals". When operating in this mode, the inverter will supply power to the backup loads from the PV and the battery ...

I'd wanted to find out what's it like to go truly off grid for a while, and Estancia Ranquilco provided me the first opportunity to experience life at a slower pace. It also allowed me to develop a closer relationship with ...

Likely because it's drawing some grid along with batts and solar, even though it doesn't show it, at least that's how mine is working. When it shows no grid use I can still see 3-6amps use from grid on each grid leg with amp meter. Kinda sucks. I go to off grid mode and that stops but then I get the fluctuating power
