

In the past decade, traditional leaders like Toyota, Panasonic, and Samsung have been investing heavily in solid-state battery research and development. In 2023, Toyota revealed a prototype ...

The government of Victoria in Australia is fuelling its cleaner energy efforts as it accelerates the development of Global Power Generation's battery energy storage system (BESS) project in ...

Berkeley Lab AMCR researchers have developed a machine learning framework that dramatically accelerates battery lifespan predictions--using far fewer experiments--by combining expert ...

Molecular Universe is SES AI's battery material discovery software and service platform. According to the company, the tool "maps the vast universe of small molecules" relevant to ...

Victoria's latest neighbourhood battery funding round marks a critical step toward a more democratized, decentralized energy future. As the global energy transition intensifies, localized ...

Up to \$6.63 million is available under Round 3 of the 100 Neighbourhood Batteries (100NB) Program. Each successful battery project can receive up to \$400,000, with applications open from 15 July to 15 September. ...

Advanced Li-ion batteries have required an incredible amount of research and development to reach the point where they are now: playing a central role in important sustainability efforts, ...

Once switched on, the battery will be capable of supplying power to as many as 230,000 homes for four hours at times of high demand. EnergyAustralia and Banpu Energy Australia will now ...

A transformative research partnership led by Swansea University in the UK, in collaboration with tertiary institutions in Kenya and Nigeria, has secured major UK government funding to fast ...

Semantic technology is revolutionizing how the battery research community collaborates. It is becoming even more important as artificial intelligence agents emerge in the field. This article ...

The Australia-US Researcher Exchange Network aims to strengthen Australia-US research ties, build Australian research capacity in battery technology, and ultimately contribute to the development of a robust ...

In addition, the country has now formed the world's largest battery manufacturing value chain, extending from material research and development, battery production and recycling to equipment support, making such ...

Battery research and development victoria

Two projects led by the University of Oxford have received a major funding boost from the Faraday Institution, the UK's flagship institute for electrochemical energy storage research. The funding is part of a £19 million ...
