I have a customer solar camera mounted on the eave of the north side. The solar panel is not getting enough sun to charge the battery. If I just moved the solar two inches up and over by two inches up on to the roof, the panel would get plenty of sun. But as it is, the panel is in shade by the roof edge most of the day.

Reolink Solar Panel ylläpitää akun latauksen ilman verkkovirtaa. On

I tested how long a reolink argus 2 will last with a fully charged battery and some usage/recordings. I then tested it from a full charge again but with the solar panel plugged in, without collecting any sunlight. With the same amount of usage. I found that the camera will last about 30-40% longer without the solar panel plugged in. Why is this?
