To understand the charging process, consider these components: solar panels, sunlight, and the lithium battery. Solar panels capture sunlight and convert it into usable electrical energy. A 5 kWh lithium battery stores this energy for later use. When sunlight hits the solar panels, the efficiency rating determines the amount of energy produced.

Also the internal construction of the battery matters a lot for both safety and reliability. From the tear-downs people have done, there's real evidence of why the SOKs are so much cheaper than the competition. To me, I'd rather go with less battery that's more reliable and will last longer and just pay for the better brand.
