Where is Bouvet Island?

Welcome to Bouvet Island, a small volcanic rock in the South Atlantic. The Sub-Antarctic territory is thousands of kilometres from civilisation, and its high cliffs and ice-cap mean very few people have ever put a foot on it. The weather doesn't help. Sticking out of the ocean the way it does means conditions can deteriorate very fast.

Is Bouvet Island a biotic exchange Island?

Especially worth mentioning is the island chain of the Scotia Arc, which via the West Wind Drift and a system of eddies is continuing to support to some extent the biotic exchange between areas north and south of the Polar Front. Bouvet Island is among the least studied islands of the Southern Ocean (Watkins et al. 1984).

Could Bouvet Island expand eastward?

Bouvet Island is among the least studied islands of the Southern Ocean (Watkins et al. 1984). Its remote situation within the ACC/Westwind Drift raised speculations as to a possible eastward expansion of the South American biogeographic provinces.

How far is Bouvet Island from Antarctica?

Bouvet Island is one of the most remote islands in the world. The closest land is Queen Maud Land of Antarctica, which is 1,700 km (1,100 mi) to the south, and Gough Island, 1,845 km (1,146 mi) to the north.

What research is conducted on Bouvet Island?

Research conducted on Bouvet Island covers an extensive array of fields. Climatologists study the island's weather patterns and their relation to global climate systems. Geologists are interested in its volcanic activity and the formation of the Mid-Atlantic Ridge. Biologists explore the unique adaptations of its wildlife to extreme conditions.

What makes Bouvet Island unique?

Bouvet Island's geology is as fascinating as it is unique. The island is essentially the summit of a submerged volcano, part of the Mid-Atlantic Ridge. This volcanic origin contributes to the island's most prominent geological feature, Olavtoppen. This peak, though dormant, hints at the island's tumultuous geological past.

Bouvet Island itself is located on a branch of this ridge known as the Bouvet Triple Junction, where three tectonic plates meet. The volcanic activity on Bouvet Island is characterized by effusive eruptions that result in the gradual accumulation of lava flows and the formation of a shield volcano.

Sunrise and Sunset. Times of sunrise and sunset in Bouvet Island during August 2026. Taking August 1, 2026 as reference, the sun rises at 09:34:02 at 59.32°NE (Northeast) and sets at 18:12:07 at 118.34°ESE (East-southeast).
