

Carbon electrode physics

Abstract The Control of the crystal growth of perovskite plays a crucial role in the performance improvement of perovskite solar cells. In this work, we prepared perovskite with lead acetate ...

Safety management in artificial graphite electrode production is of paramount importance for any supplier in this industry. As a supplier of Artificial Graphite Electrodes, we understand the ...

We report atomistic simulations of self-healing from a chemical perspective proving the impossibility of tuning the electrical conductivity of the soot by finding an interplay of various ...

This research investigates the structural and optical properties of carbon quantum dots (CQDs) for the sensitive detection of ascorbic acid (AA), an essential biomolecule used widely in health ...

As carbon fiber in carbon fiber-reinforced polymer (CFRP) is um-sized (~7.84 um, similar to human hair) with an aligned direction and conductive, the reclaimed aligned carbon fiber can ...
