A commutator is a key component in a d.c. generator that converts the alternating current (AC) produced in the armature coil into direct current (DC). It does this by reversing the connections ...

Exploring many-body chemical systems on classical computers often involves solving the Schrödinger equation. However, this approach is frequently limited by the exponential increase ...

The article deals with finite groups in which commutators have prime power order (CPPO-groups). We show that if  $G$  is a soluble CPPO-group, then the order of the commutator subgroup  $G' = G^{\{prime\}}$  is divisible by at most two ...

Let  $G$  be a finite group, let  $x \in G$  and let  $p$  be a prime. We prove that the commutator  $[x, g]$  is a  $p$ -element for every  $g \in G$  if and only if  $x$  is central modulo  $Op(G)$ , where  $Op(G)$  denotes the ...

We show that if  $G$  is a soluble CPPO-group, then the order of the commutator subgroup  $G' = G^{\{prime\}}$  is divisible by at most two primes. This improves an earlier result saying that the order of the commutator subgroup  $G'$  ...
