Should Inner Mongolia develop CCS technology?

If Inner Mongolia focuses on securing a stable supply of energy in the long term during the energy transition process, it can choose to develop CCS technology, and under this policy scenario, Inner Mongolia's energy supply will remain stable, and its carbon emission will show a downward trend in the long term.

Is Inner Mongolia a good place to invest in wind and solar energy?

Leveraging its advantages in wind and solar energy resources, Inner Mongolia, supported by national energy policy, has prioritized the development of the wind power and photovoltaic industries, the scale of the industry has been steadily increasing.

Why did Canadian Solar not invest in Qinghai?

In addition, Canadian Solar's previously announced polysilicon investment in Qinghai, China, has not launched as planned due to changes related to local power supply. All investment projects are subject to change at the Company's discretion based on market and strategic considerations.

How much solar power does Inner Mongolia have?

Foresight Industry Research Institute Inner Mongolia experiences yearly sunlight hours ranging from 2600 to 3,400, and its total solar radiation is the second highest in China. In 2023, the region's installed solar power generation capacity reached 23.06 million kilowatts, reflecting a 47.12 % growth from 2022.

How will Inner Mongolia affect China's Energy Security?

If Inner Mongolia focuses on short-term carbon reduction, it can promote energy transition and reduce carbon emission by promoting carbon pricing in the early stage, but this energy transition path will affect China's energy security.

Is Inner Mongolia a major energy supplier in China?

Inner Mongolia is a significant energy supplier in China, supplying about 20 percent of its electrical production to the nation. In the "Business as usual" scenario, future energy demand will align with economic growth. As electrification progresses, China's electricity demand will increase significantly each year.
