

The end-of-life vehicle recycling market exhibits varied growth dynamics across global regions, driven by environmental policies, rising automotive waste, and advancements in recycling ...

Toray Advanced Composites, Daher, and TARMAC Aerosave announce the launch of a joint End-of-Life Aerospace Recycling Program for commercial aircraft production. Working with Airbus, ...

This rapid expansion underscores the importance of sustainable practices in the solar sector, especially since solar panels, with a lifespan of roughly 30 years, will require responsible end ...

For end-of-life management, Jinko is exploring advanced recycling methods, reporting a 99 per cent material recovery rate for certain components, she said. The report underscore­s that by ...

When Goddard Vehicle Recycling Ltd. last featured in ATF Professional back in 2023, the company was still finding its footing as a relatively new authorised treatment facility (ATF). Fast forward to today, and while the yard may not yet ...

Car Baler vs. Shear Baler: Which Is Better for End-of-Life Vehicle Recycling? Table of Contents As vehicle recycling becomes more important for the environment and the circular economy, choosing the right equipment is key. ...

Recycling and reuse in stationary energy storage (second use) are beneficial options to further utilize electric vehicle (EV) battery materials and residual capacities after end-of-life (EoL). In ...

When the SOH is below 80%, the end-of-life batteries would be transferred from the reuse application to the recycling process (See details of battery recycling roadmap from Methods, ...

Every year, thousands of CNC machines and lathes reach the end of their primary service life, contributing to the growing crisis of electronic waste. Recycling these valuable industrial equipment pieces offers a sustainable alternative with ...

Projections for global PV end of life (EOL) management by the International Renewable Energy Agency (IRENA) indicate that under a regular loss scenario, the global cumulative amount of ...

END-OF-LIFE RECYCLING In Europe, national eco-organizations manage the collection and processing of small electrical appliances that are at the end of their service life. Groupe SEB is particularly involved in this in France, ...

End-of-life recycling

Das Recycling von Lithium-Ionen-Batterien (LIB) wird eine zentrale Rolle für Europa spielen, um Zugriff auf strategische Rohstoffe zu bekommen. Neben Skalierungsvorhaben ...

An issue also lies with limited vehicle recycling infrastructure. Fewer than 10 per cent of EU's recycling facilities are able to efficiently recycle and sort plastic from end-of-life vehicles. The ...

The competition authorities of the EU and UK are investigating alleged anti-competitive activities in relation to the recycling of end-of-life vehicles (ELVs). The anti-trust watchdogs have concerns that several companies and ...

Amid global trade tensions that have affected the rare earth supply chain, the potential to recycle minerals from end-of-life electronics has drawn a renewed interest as one domestic supply line for the materials.

Improved vehicle design to facilitate removal of materials, parts and components for reuse and recycling
Binding targets for use of recycled materials Reinforced producer responsibility for ...
