

US President Donald Trump has declared his disdain for electric vehicles (EVs) and with sales disappointing, carmakers who invested heavily in battery production could follow General ...

With the escalating global demand for sustainable transportation, Fuel Cell Electric Vehicles (FCEVs) have emerged as a prominently researched domain. In light of this development, an ...

Two Korean companies, S-OIL and Bumhan Unisolution, just signed a pact to work together to further develop energy storage systems (ESS) and electric vehicle battery pack systems using ...

Abstract Electric vehicles (EVs) are becoming increasingly popular, but their widespread adoption is still limited by issues such as short battery life and limited driving range. To address these ...

The Trojan T-105 Plus 6V Flooded Battery is a deep-cycle lead-acid battery designed primarily for electric vehicles requiring sustained power delivery, including golf carts, low-speed industrial ...

Electric vehicles (EVs) have emerged as a pivotal technology for environmental protection, driving the development of battery energy storage systems (BESS) for sustainable charging solutions ...

They also integrate the EVs as critical distributed energy storage units, and helps in grid stability, and energy load balancing through vehicle-to-grid (V2G) integration. Solid-state batteries ...

Press Release, 23 July 2025 Southwest Research Institute (SwRI) has successfully completed its ambitious eight-year-long connected and automated (CAV) vehicle technology project. As part ...

Converting electric cars to batteries helps stabilize the power grid. The technology allows idle vehicles to be used to store and release energy. Pilot projects in Europe are exploring these ...

Recent research published in "Carbon Neutrality" sheds light on the promising role of Thermal Energy Storage (TES) systems in the quest for carbon neutrality, particularly in the ...
