

# Ercot generation by source

Solar and wind generated 40.2% of the ERCOT grid's electricity this year through June. When coal plants shut down for unexpected maintenance, solar and wind stepped in, providing about ...

The monthly survey Form EIA-860M, Monthly Update to Annual Electric Generator Report supplements the annual survey form EIA-860 data with monthly information that monitors the current status of existing and proposed ...

Primergy Solar has brought the 408 MWac Ash Creek solar facility in Texas online, adding new capacity to the Electric Reliability Council of Texas (ERCOT) grid. The project is now fully ...

What is the forecast ERCOT peak demand for 2025? ERCOT forecasts a 2025 peak demand of 90,336 MW (Source: May 2024 ERCOT CDR Report). As a comparison, ERCOT hit a record peak demand of 85,931 MW ...

Its responsibilities extend far beyond simply delivering power--ERCOT coordinates energy generation, manages the grid in real-time, and oversees a competitive energy market that fosters innovation and cost ...

Electric Power Monthly Tables 6.2a, 6.2b, and 6.2c show electricity generating capacity by state for all sources, renewable sources, and fossil fuel sources, respectively. Tables show current ...

Between 2021 and 2024, ERCOT added nearly 25,000 MW of wind and solar capacity, along with 9,000 MWh of battery storage. In the early 2000s, Texas added over 27,000 MW of new natural gas generation in just five years. These ...

Solar accounted for 27.7% of peak generation in ERCOT during June, even as total ERCOT demand hit a new record high. The ongoing electric power transition in the Electric Reliability Council of Texas (ERCOT) belies the anti-renewable ...

All loads should pay for a portion of transmission, "regardless of whether they're co-located or have behind the meter generation," said Clif Lange, general manager of South Texas Electric ...

ERCOT's generation data shows natural gas consistently providing the single largest share of the grid's capacity - often 40% or more - balancing out the volatility that comes with more wind and ...

President Donald Trump claims that rapid adoption of solar and wind power has made U.S. electricity unstable and expensive, justifying his bid to end most subsidies for renewable energy.
