

WEG has announced the signing of contracts with Alupar for the supply of a transmission grid stabilization system for Chile. The scope includes a solution with synchronous condensers, ...

Community and distributed solar assets are some of the most cost-effective, fastest to market forms of energy generation providing grid stabilization. 38 Degrees North has proven itself as a ...

The grid needs it to maintain voltage reliability and stability during faults such as lightning strikes or equipment failures. Grid stability services are now in high demand as a response to the onslaught of renewable capacity additions (585 ...

WEG has signed contracts to deliver a large-scale grid stabilization system in northern Chile, as part of a project led by Brazilian transmission company Alupar. The deal includes the supply of ...

By holistically investing in digital tools for grid stabilization alongside physical assets, the industry can avoid instability and blackouts, ensuring a sustainable future powered reliably by clean ...

Green hydrogen, produced via renewable-powered electrolysis, offers a promising path toward deep decarbonisation in energy systems. This study investigates the major technological, infrastructural, and economic challenges facing green ...

Now grid operators are faced with the challenge to provide sufficient system inertia of synchronous generators with high rotating masses to stabilize the grid. A SVC PLUS FS<sup>®</sup>; (frequency stabilizer) can solve this challenge as it ...
