

Why do we need solar power in Guinea?

to exploit Guinea's solar power potential in order to diversify the country's energy mix and increase the availability and reliability of power.

How khoumagueli solar plant will benefit the National Grid?

The combination of hydro and solar energy will help in maximising delivery of renewable energy to the national grid. The Khoumagueli Solar plant is expected to mitigate against the impact of fluctuating rainfall on hydro power generation at the Garafiri plant.

What is khoumagueli solar project?

It comes after a concession agreement was signed in February 2019. The Khoumagueli solar project will complement the nearby 75-MW Garafiri hydroelectric plant to optimise renewable energy supply to the national grid. The solar facility is expected to reduce the impact of fluctuating rainfall on the Garafiri plant's generation.

Does Guinea have an electrification rate?

Guinea's has a national electrification rate of 35.4%. The West African country is looking to increase its electrification rate to meet its developmental goals, as well as diversify its energy mix. Guinea's existing electricity supply is largely derived from hydro power which can be susceptible to seasonal fluctuations in rainfall.

El Controlador Bomba de Agua Fuji 230V 3-4kWp IP54 200Mt AS ha sido diseado de manera especfica para potenciar la eficiencia en el bombeo de agua, aprovechando la energa solar directa. Su funcin principal consiste en garantizar el ptimo desempeo de una bomba de agua trifasica al aprovechar la energa generada por un conjunto de paneles solares.

Khoumagueli will be Guinea's first grid-connected solar PV power project. As one of Guinea's earliest renewable IPP initiatives, the Khoumagueli project has used grant funding from PIDG's Technical Assistance (TA) to support work to build government capacity to undertake future renewable energy projects with the private sector.
