

Hong Kong ener power

How is energy used in Hong Kong?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

How much energy is generated from hydropower in Hong Kong?

Since it is not possible to clearly determine the amount of generated energy, all energy from hydropower is displayed separately. In 2020, renewable energy accounted for around 0.3 percent of actual total consumption in Hong Kong. The following chart shows the percentage share from 1990 to 2020:

How much energy does Hong Kong use per year?

of electric energy per year. Per capita this is an average of 6,015 kWh. Hong Kong can partly be self-sufficient with domestically produced energy. The total production of all electric energy producing facilities is 33 bn kWh. That is 75 percent of the country's own usage. The rest of the needed energy is imported from foreign countries.

What is Hong Kong's energy future?

The country's priority is to develop renewables. The ENB estimates that Hong Kong only has an achievable potential of 3-4% of total electricity consumed from wind,solar and waste-to-energy sources until 2030. The Hong Kong energy market report provides expert analysis of the energy market situation in Hong Kong.

Does Hong Kong have nuclear power?

Hong Kong has no indigenous supply of nuclear energy and there is no nuclear power station in the territory. However,Hong Kong has imported electricity from Mainland China from the Daya Bay Nuclear Power Plant in Shenzhen,Guangdong since 1994.

What is the fuel mix for electricity generation in Hong Kong?

In the overall fuel mix for electricity generation in Hong Kong,natural gas dominates the fuel mix in Hong Kong,in 2020 on set-out basis,at around 48%,followed by nuclear energy and renewable energy accounted for around 28% and coal for around 24% .
