

Hydrogen venting at 100ppm safe threshold for indoor cabinets

In recent years, the rapid development of lightweight Unmanned Aerial Vehicle (UAV) technology under 250 g has begun to challenge the validity of existing mass-based safety classifications. ...

As the world's third-largest hydrogen consumer, getting clean hydrogen right is crucial for decarbonising the EU's hard-to-abate industries. Finalising the implementation of the methane ...

Transformer enclosures protect transformers from dust, water, and damage while keeping people safe from high-voltage parts. They help transformers work efficiently and last longer, whether inside or outside. ...

Venting for deflagration involves designing a system to safely release the pressure generated by a deflagration event, preventing structural damage to equipment and containment vessels. The primary goal is to provide ...

ASTM F1624-12 (2018) Standard Test Method for Measurement of Hydrogen Embrittlement Threshold in Steel by the ...

The National Green Hydrogen Mission aims to create a conducive ecosystem for the development and deployment of green hydrogen technologies, facilitating a sustainable and self-reliant energy system while simultaneously ...
