

Island energy Guam

How is energy consumed in Guam?

In Guam, the consumption of energy is heavily influenced by its remote location. Almost all energy is reliant on imports of petroleum products for use in transport and electricity. Guam does not have any domestic production of conventional fuels such as oil, natural gas, or coal.

Is Guam a renewable Island?

Guam's renewable portfolio standard requires that 50% of the island's electricity sales come from renewables by 2035 and 100% by 2040. Guam's utility plans to procure 180 megawatts of new renewable generating capacity by 2027. Last Updated: March 21, 2024 Guam imports petroleum products to meet almost all of its energy needs.

Does Guam use fossil energy?

3 Guam has no fossil energy resources and meets nearly all of its energy needs--including the fuel for generating most of its electricity--with imported petroleum products. 4,5 However, Guam is increasing its use of renewable energy resources for electricity generation. 6,7

What are the five major energy policies in Guam?

These include wholistic energy strategies; grid-tied and distributed renewable energy, energy efficiency and conservation, transportation; climate change and resilience; and equity, workforce, and environmental justice ((Guam Legislature n.d.; United Nations n.d.), unless otherwise noted). This list does not include military related policies.

How much energy is lost on Guam?

Transmission and distribution losses on Guam are estimated to be 4.9% according to the U.S. Department of Energy (2020). This is comparable to the United States as a whole (at 5%) (U.S. Energy Information Administration n.d.-b).

Does Guam have plans for a solar farm?

Guam has announced plans for several large solar farms. The island has adopted a renewables policy that requires the reduction of fossil fuel consumption by 2020 to 20% less than the rate in 2010. Another requirement is for 5% of electricity in 2015 to be from renewables, increasing to 25% by 2035. A net metering program began in 2009.
