How many kWh will Jersey's solar array generate?

The 1,311 square metres, 255kWp array is expected to generate over 240,000 units a year - enough to power 33 Jersey homes using an average 7,300 units(kWhs) a year. It's the third solar array to feed directly on to the grid.

Who installed the largest commercial solar installation in Jersey?

SunWorks was contracted by Jersey Electricity to install the Channel Islands' largest solar installation at Jersey Dairy, a total of 1,516 Solar panels. This saw the start of JE's lease scheme for commercial building owners and enabled SunWorks to deliver a world-class commercial solar installation in Jersey.

What happened to solar in Jersey (at SunWorks)?

Despite the global Pandemic, solar continued to grow at SunWorks in Jersey. In 2021, the company moved its headquarters to St Helier Business Park and was able to install solar panels there.

Why is solar important in Jersey?

Solar is a vital component of modern homes in Jersey, contributing to the state's renewable energy and energy management. For those focused on the bottom line, solar serves as a safeguard against rising grid electricity costs.

What happened to Jersey electricity?

The first SunWorks project was completed for Jersey Electricity at the La Collette Energy Division building. After moving to Regus Offices in St. Helier, the company's capacity for installation significantly increased. This year, 41 installations were completed, bringing the total number of SunWorks solar sites on the island to over 115.

How can Sunworks make a more diverse energy future for Jersey?

Sunworks is striving to make a more diverse energy future for Jersey by providing the best advice, service, and solar technology. We look forward to a time when Jersey can say it makes the best use of its resources and is an example to other offshore jurisdictions. Sunworks' efforts towards this goal are integral to modern homes being connected and integrated.

In the pursuit of a sustainable future, renewable energy solutions like solar power have gained significant popularity. New Jersey, known for its commitment to clean energy, offers an opportunity for homeowners and businesses to not only generate their own electricity but also sell any excess power back to the grid.. In this article, we will explore the concept of Net ...

The power of a PV cell is measured in kilowatts peak (kWp). That's the rate at which it generates energy at peak performance in full direct sunlight during the summer. PV cells come in a variety of shapes and sizes. Most PV systems are made up of panels that fit on top of an existing roof, but you can also fit solar tiles.

Currently, solar only accounts for less than 0.5% of the island's energy generation, but the JE Solar 5000 initiative hopes to boost this to 6.5% of the energy share by 2030. Powering 5000 homes is the equivalent of generating 36MWp of electricity from various solar voltaic sources - enough to power around 10% of housing in Jersey.
