

Expertise and services in energy efficiency . For many years, Fraunhofer IPA has been working on solutions to improve efficiency in numerous fields of technology (e.g. energy systems, coating technology, surface engineering, factory design, robotics and machine construction), as well as on planning and control methods and automation technology:

The emergence of intelligent energy management systems has the potential to fundamentally change how energy is distributed, maintained, and adapted for microgrids and electric vehicles (EVs) in the future. This study focuses on standalone hydrogen-based systems, which may become more complex when applied to multi-grid systems. ...

achieve optimal energy use and improve the efficiency, reliability, and economy of the provided utility services. Self-monitoring and control of smart grids are realized using intelligent sensors and smart meters for energy transmission and distribution for real-time analysis of current consumption. An intelligent energy system involves

3 ???· Most of the network line refurbishment works will replace overhead lines with underground lines, further improving the security of supply in Latvia. Under the programme, ...
