A: The charge/discharge power will be limited by both by inverter and BMS. For example, the discharge power limitation for inverter is 3000W, and there are only two Pylon US2000 connected to the inverter, so the peak discharge current limited by BMS is $25A \times 2 = 50A$, so the system maximum discharge power is about $50V \times 50A = 2500W$.
