If your system is at capacity, or getting too many shades, another option is to get panels with a micro grid tie inverter for each of them, that you could just connect to your off-grid AC circuitry. That way shades on one panel does not reduce down your whole system production, you don't have to invest on thicker wire for panels.

I would prefer a bundled system grid tied, micro inverters, with battery back up. Working through pge calculations they recommend a 7.6 kW (DC) with 20 panels. They also recommend battery backup size of 13.5kWh (battery capacity) and 5kW (max continuous) I need to do this as my electric pge is out of control expensive and even with their ...
