

Multi-operator sharing

Our study intends to bridge these gaps by exploring multi-UAV coverage path planning within a heterogeneous UAV framework, incorporating multiple base stations and operators, reflecting ...

Pharmacies disappearing across PA; operators blame broken payment system Pharmacists say insurance reimbursements fail to cover their costs. They say a new law isn't enough to reverse ...

With a shift from single-operator to multiple-operator scenarios, the interplay between reciprocal altruism and compliance becomes increasingly important. Consequently, the current study ...

Document Services Operator; Evening Shifts (Multiple Schedules Available) in Chicago, IL - Kirkland & EllisAt Kirkland & Ellis, we don't just meet the standard for legal excellence -- we ...

Payroll System: The operating system that uses batch processing may be useful when determining the salaries of multiple employees at the end of the month. We are able to provide a batch of multiple jobs each involving the ...

Multi-tenant storage models enable multiple users, teams, or applications to share underlying storage resources securely and efficiently. Designing and implementing such models in ...

This correspondence investigates multi-operator systems enhanced by reconfigurable intelligent surfaces (RIS) with electromagnetic interference (EMI) and channel uncertainties. We propose ...

One of the key initiatives by 3GPP for spectrum sharing is the Licensed Shared Access (LSA) framework. LSA allows multiple operators to share licensed spectrum bands in a controlled ...

A hybrid self-supervised Koopman deep learning algorithm has been developed to learn the Koopman operator for nonlinear multi-agent systems (MASs) using partial state information. In ...

Double operator integrals, originally introduced by Y.L. Daletskii and S.G. Krein in 1956, have become an indispensable tool in perturbation and scattering theory. Such an operator integral ...

Network devices are physical devices that allow hardware on a computer network to communicate and interact with each other. Network devices like hubs, repeaters, bridges, switches, routers, gateways, and brouter help ...
