

How much energy does Myanmar have?

In 2017, Myanmar's proven energy reserves comprised 105 million barrels of oil, 5.56 trillion cubic feet of gas, and 542.56 million metric tonnes of coal. The country is a net exporter of energy, exporting substantial amounts of natural gas and coal to neighbouring countries. However, it imports around 90% of its total oil requirements.

How will Myanmar's energy supply change in 2040?

Hydropower will increase at an average annual rate of 6.3% in 2016-2040, faster than fossil fuel. Solar/PV is projected to grow the fastest, at 22.3%, in line with the government programme to increase the RE share in the total mix of power generation. Figure 6.4. Total Primary Energy Supply, Myanmar Mtoe = million tons of oil equivalent.

What is the Ministry of energy in Myanmar?

Ministry of Energy was formed on 1985 April (12) by Council of State. In 2016, union government combined Ministry of Electric Power and Ministry of Energy as Ministry of Electricity and Energy. The Ministry of Energy, Myanmar initially focused on developing the country's oil and gas sector, which was the most important source of energy at the time.

What is Myanmar's energy plan?

The government's plan is to increase further the share of natural gas, coal, hydro, and other renewables in the total generation mix and decrease oil share. Myanmar also has plans to export electricity to neighbouring countries, such as Thailand and China, from its hydropower plants.

What is the energy saving potential of Myanmar?

According to the 2015 Asian Development Bank report 'National Energy Efficiency and Conservation Policy, Strategy and Roadmap of Myanmar', electricity consumption in all sectors and achievable energy saving potential should reach 12% by 2020, 16% by 2025, and 20% by 2030.

How is electricity produced in Myanmar?

Electricity in Myanmar is mainly produced by hydropower and gas power plants. Myanmar also has coal, solar/PV, and biomass power plants. The electricity generation process in the model calculated the fuel requirement to produce electricity. The calculation of the primary energy requirements for electricity generation involves the following steps:

The Yangon Waste to Energy Plant employs 91 workers including officials, engineers and garbage collection workers. For annual maintenance, the plant usually stops its operations for about 40 days a year, said U Thura Aung, member of the YCDC. "It is the first-ever Waste to Energy Plant in Myanmar, and air pollution will be kept to a minimum.
