

New tech solar system

Its Dynamic Solar Tracking and Solar-First Energy systems automatically optimize charging, even under low light. In optimal conditions, 20 minutes of sunlight yields up to an hour of video playback.

The largest interstellar comet discovered could be an alien technology. The newly found Manhattan-sized object, named 3I/ATLAS, is approximately 7 miles wide and racing through our solar system. Avi...

In a cosmic first, scientists watched planet-forming materials begin to solidify around a newborn star, offering a peek into what our Solar System may have looked like at birth. It's a stunning ...

In primitive meteorites, tiny calcium-aluminum-rich inclusions tell us that the Solar System's clock started ticking 4.567 billion years ago. Those inclusions condensed from a searing vapor and ...

Astronomers have observed a solar system being formed for the first time, as hot gas condenses into solid minerals around the baby star (Picture: ESO) Astronomers have witnessed the ...

Astronomers have, for the first time, discovered the moment when planets started to form around a sun-like baby star, scientists reported Wednesday. The specks of planet-forming material are...

Solar panel installation costs have dropped significantly in the past decade. Solar energy systems can make new homes cost more and increase a home's selling price. The expense of installing solar panels can show returns in 5-10 years ...

A new planetary system is forming around the young star HOPS-315. Scientists observed the earliest stages of planet formation around another star. The process involves the cooling and solidifying ...

Planets are being created in the disk of material surrounding a baby star in Orion. International researchers have observed the creation of hot minerals just beginning to solidify. This marks the...

How Many Solar Systems Are in Our Galaxy? The Short Answer: Our planetary system is the only one officially called "solar system," but astronomers have discovered more than 3,200 other stars with planets ...

In our solar system, the very first solid material to condense near Earth's present location around the sun is found trapped within ancient meteorites. Astronomers age-date these primordial ...

Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own satellites; comets and other icy bodies; and ...
