For a 1000-watt inverter, a 24v battery system usually makes the most effective choice. For example, if you intend to operate a 500-watt appliance for a duration of 3 hours, you would require a minimum battery ...

A 48V battery rated for 750W is only good for around 16A of current. Best case scenario, you'll trip the BMS in that battery constantly. Worst case, the cells will heat up at enter thermal runaway. You need a 25A capable battery for that 25A controller. $25A \times 48V = 1,200W$, so look for a battery that is rated for either 25A or 1,200W.
