

Erayak Power Solution Group Inc. (NASDAQ: RAYA) has captured attention in 2025 with a \$3 million registered direct offering and a stock price that has plummeted by 90.66% year-to-date. ...

We study the joint power allocation and reflecting element (RE) activation to maximize the energy efficiency (EE) in communication systems assisted by an intelligent reflecting surface (IRS), ...

On the back of their disappointing performances in Saturday's qualifying session, Aston Martin driver Fernando Alonso and Mercedes racer Andrea Kimi Antonelli have followed Ferrari's ...

This paper provides a systematic review of energy storage optimal allocation in new power systems from three perspectives. First, energy storage technologies are categorized based on ...

On this basis, power flow tracking technology is further introduced to conduct a detailed analysis of distributed energy power allocation, providing support for system operation optimization and ...

Erayak Power Solution Group (NASDAQ: RAYA) has ignited debate among investors with its recent \$3 million equity raise, which involves issuing 30.6 million Class A ordinary shares at ...

Grey Wolf Optimizer (GWO) is the technique that is used to select the optimal sizing of reactive power compensators and distributed generation units. Two approaches are used: ...

In this paper, we investigate the resource allocation for multi-dielectric waveguide-assisted broadcast systems, where each waveguide employs multiple pinching antennas (PAs), aiming ...

In order to achieve better power allocation results and more control objectives for the hybrid energy storage system (HESS), this paper proposes a power allocation strategy for battery ...

McLaren's Lando Norris and Oscar Piastri will compete at today's Belgian Grand Prix with fresh power unit components, which sees them exploit their maximum power unit allocation for the ...

This letter presents a model for coordinated optimal allocation of wind, solar, and storage in microgrids that can be applied to different generation conditions and is integrated with the Gurobi solver.

Time-switching is a common simultaneous wireless information and power transfer (SWIPT) receiver technique in which the receiver alternates between information decoding and power ...

It would be great to see the introduction of message consumption and allocation details added to the agent

Power allocation

inventory or a standalone Power BI report. If in the agent inventory, perhaps even a ...

By aligning human resource strategies with broader business objectives, manpower planners help organizations make informed decisions about workforce investments, resource allocation, and organizational structure. 5.

The allocation of optimal power with optimal association of transceivers optimization yields quality-of-service (QoS) to the multiple users in the system. The system energy efficiency, sum rate ...

To address this issue, the robust resource allocation in a multi-user pinching antenna downlink system with uncertain user positions is investigated, aiming to minimize total transmit power ...
