

From floating wind advances in the UK and France to robot-ready offshore tech and life-extension projects in Denmark, this week highlights how innovation and global cooperation continue to ...

Improving the effectiveness of mooring lines and dynamic cables on floating offshore wind farms is the focus of a new project commissioned by the Offshore Renewable Energy (ORE) Catapult.

A research project carried out by The Oyster Restoration Company (TORC) and supported by RWE has established that large-scale native oyster reef restoration at offshore wind farms in ...

Polish solar and wind project developer Pad Res has contracted around 160 MW of the capacity allocated for photovoltaics (PV) in Poland's July auctions for electricity from renewable sources.

The offshore wind industry faces challenges of impairments, project abandonment, and no bids in auction rounds, following several years of cost increases and project delays. Both industry and governm...

The future of RES is set to be transformed by AI, particularly in cutting-edge technologies like floating wind farms and space-based solar power. As the need for cleaner, more efficient ...

ABSTRACT Wind farm flow control has been a key research focus in recent years, driven by the idea that a collectively operating wind farm can outperform individually controlled turbines. ...

The wind energy industry relies on computationally efficient engineering-type models to design wind farms. Typically these models do not account for the effect of atmospheric stratification in ...

The aim of National Institute of Wind Energy under its WRA division is to locate wind rich sites in the country through data analysis for the development of wind energy utilization. The data generated thus from all parts ...

Abstract and Figures Floating offshore wind farms (FOWFs), as a key technology for harnessing deep-sea wind energy resources, face significant challenges due to the complex ...

National Institute of Wind Energy is at the forefront supporting the Ministry of New and Renewable Energy for the orderly development of wind power in the country, for 25 years now. We offer our services to the wind ...

By Alex Clerc, Senior Controls Engineer At RES, we are committed to driving innovation in renewable energy, and digital solutions are central to unlocking more energy from existing ...

RWE, one of the UK's leading power generators, and The Oyster Restoration Company (TORC) have taken an important step forward for offshore wind developers seeking credible, scalable, ...

Therefore, this paper proposes a multi-layer attention neural network strategy for weather factor suppression of UAV fault inspection of wind farm stations to achieve high-precision unmanned ...

Accurate wind speed forecasting is critical for reliable and efficient wind energy management, especially in large-scale wind farm clusters with complex temporal variability. To address the ...

Res wind farm
