According to NBC. California is facing triple-digit temperatures in its inland valleys and deserts, but its energy grid appears well-prepared due to increased reliance on renewable energy and expanded lithium-ion battery storage capacity. Solar energy production reached a historic high in May, and the state's battery storage capacity has nearly doubled since 2022, now making it

California's solar costs are twice as high as in many other developed areas, primarily due to outdated permitting and delays. To address this, California passed the Solar Access Act (SB 379) to streamline solar permitting. Under this act, cities and counties must adopt online, automated permitting for residential solar systems.
