Li-Ion batteries have a "sweet spot" for storage. Contrary to standard AA or AAA batteries that you buy fully charge, Li-Ion cells CAN NOT remain fully charged for a long period of time without degrading. Fully charged Li-Ion - degrades the chemistry inside the cells when storage is above 48H as its full of "power" that needs to do "something";

"The UL9540A cell-level test is the baseline for a battery's safety profile," said Matthew Paiss, Technical Advisor, Battery Materials & Systems at the Pacific Northwest National Laboratory.

Good question kind redditor. Nothing more than the current transport laws for hazardous materials like small batteries. But once a battery gets over a certain capacity/size, I believe that we will see new laws governing where you can and can't take or use it. Not just for eBikes but all battery powered motor vehicles and battery storage.

Stationary battery energy storage systems (BESS) have been developed for a variety of uses, facilitating the integration of renewables and the energy transition. Over the last decade, the installed base of BESSs has grown considerably, following an increasing trend in the number of BESS failure incidents. An in-depth analysis of these incidents provides valuable ...

When storing batteries, it is crucial to follow safety precautions to prevent hazards. Store batteries in a cool, dry place away from direct sunlight and heat sources. Ensure terminals are protected to avoid short circuits, and keep batteries out of reach of children. Regularly inspect batteries for signs of damage or leakage.
