SiC and GaN power devices operate at higher temperatures and frequencies than Si, allowing for more efficient power conversion in existing designs and even allowing the use of new topologies that are not feasible with silicon devices. Power supplies utilizing these materials can be more compact and lightweight, with improved overall performance.

Typical applications are 48V to 24V or 12V to 24V battery power conversion, electric vehicles, battery voltage stabilizers or high power laboratory DC power supplies. With appropriate cooling, the full power operating temperature extends from -40°C to +85°C and the RBBA3000-50 comes with RECOM's standard 2 year warranty.
