Using DIY off-grid solar to power 1500 watt space heaters is an innovative idea but challenging in practice. Solar efficiency greatly depends on your location, the amount of sunlight your property receives, and the capacity of your system. For a setup large enough to run several high-wattage heaters, you'd need a significant number of panels and a robust battery system for nights and ...

The diverter will then track your home's electricity consumption and the solar panels' production levels, and redirect any excess solar electricity to the immersion heater. With an electric heating system, this can save you around \$100-\$200 per ...

Here, an active direct solar water heater warms your home's water directly with the sun. In contrast, an active indirect solar water heater uses the sun to warm a separate fluid before transferring the heat from that fluid to your water supply. By keeping your water indoors, active indirect solar water heaters are the preferred technology for ...
