

Solid radioactive waste containers

Researchers have identified and mapped more than 3,000 barrels of nuclear waste on the seabed of the northeast Atlantic Ocean, particularly off the coast of Galicia, Spain. These barrels are ...

Inside this nuclear waste barrel, multiple barriers of concrete, steel, and resin encapsulate materials that could remain hazardous for thousands of years. Each layer is meticulously engineered to resist corrosion, pressure, and radiation, ...

Organic, inorganic, biological, and radioactive pollutants Indoor air pollution can be categorized into organic, inorganic, biological, and radioactive pollutants. Each of these pollutants can ...

Specialists from Tomsk Polytechnic University, commissioned by TVEL JSC (the management company of the Fuel Division of Rosatom State Corporation), have developed a technology for ...

In this study, a proposed centralized radioactive waste management facility modeling and spatial radiation distribution was accomplished. The radiation source terms were derived from the ...
