

Sweden is accelerating toward a fossil-free energy system and a sustainable transition in its electric vehicles sector. But this shift brings growing pressure on the electricity grid, especially ...

The energy mix in SE4, and in Sweden as a whole, is a blend of renewable and conventional sources. A notable aspect of this mix is the inclusion of nuclear power, which plays a significant role in Sweden's energy strategy.

In 2030 the new steel plant will produce 5 million tons of fossil free steel, replacing coking coal with electricity and hydrogen. Globally it is a small plant, but still more than the Swedish steel producer SSAB produce in its ...

A long history of recycling Swedish recycling history goes back quite some time. Households started sorting waste in the 1980s - first glass, then paper and cardboard followed suit. Plastic recycling got going in the 1990s ...

The demand for long-term clean electricity procurement is also being fuelled by Sweden's green industry agenda and corporate decarbonisation targets. In this article, we present a ranking of ...

Sweden is a world-leading country when it comes to green energy, with around 98 per cent fossil-free electricity production. More than 70 per cent of that comes from renewable sources, the rest from nuclear power. The ...

Blocking the solar park is perceived as a setback for Sweden's burgeoning renewable energy sector. With ambitious targets to cut greenhouse gas emissions and increase renewable ...

The majority of newly commissioned renewable energy is more cost-effective for electricity generation than most fossil fuels worldwide, a report by the International Renewable Energy Agency (IRENA ...

Advancing gender equality in the renewable energy sector Schneider Electric, in partnership with the Alliance for Rural Electrification (ARE), has developed this whitepaper to illustrate the ...

Sweden renewable electricity
