How are smart grids transforming Switzerland's electricity network?

The growing amount of decentralised electricity production combined with the need to increase energy efficiency in Switzerland is creating new challenges for the electricity network. Smart grids are helping to meet these challenges.

Why is the Swiss transmission grid important?

The Swiss transmission grid, which is like a network of 'electricity highways', has an important role to play. As the backbone of a secure supply of electricity, it makes a key contribution to achieving the goals of the Energy Strategy 2050. Switzerland's electricity system is in the midst of the greatest upheaval in its successful history.

How does the grid development process work in Switzerland?

The grid development process in Switzerland is governed by the provisions of the Federal Act on the Renovation and Expansion of the Grids ('Electricity Grid Strategy'). The relevant provisions are found in particular in the Electricity Supply Act (Article 9a-d StromVG).

Why is the grid important in Switzerland?

The grid and secure grid operations are fundamental prerequisites for prosperity and high quality of life in Switzerland. From healthcare and business to individual households, our modern society depends on electricity being available at all times, even in the most remote locations.

Can Swissgrid be used in grid planning?

In grid planning, Swissgrid can only take into account the potential for flexibility offered by artificial intelligence, decentralised consumption control and smart peak shaving in photovoltaic and wind production if it can be activated and used by Swissgrid at any time.

How does Swissgrid communicate the strategic grid?

Swissgrid communicates the procedure and results of the Strategic Grid in a transparent and comprehensible manner. The grid is the backbone of a secure supply of electricity in Switzerland. This means that far-sighted planning and development of the grid are in the interest of the national economy and the entire Swiss population.
