How to store a lithium battery?

When it comes to storing lithium batteries, taking the right precautions is crucial to maintain their performance and prolong their lifespan. One important consideration is the storage state of charge. It is recommended to store lithium batteries at around 50% state of charge to prevent capacity loss over time.

How to prolong the shelf life of lithium ion batteries?

There are several strategies that manufacturers, distributors, and consumers can follow to prolong the shelf life of lithium-ion batteries: Lithium batteries should be stored in cool environments, ideally between 15°C and 25°C (59°F to 77°F), and avoid high temperatures. Store at a partial charge.

What is a good country of rate for storing long-term lithium-ion batteries?

The most advantageous country of rate (SoC) for storing long-term lithium-ion batteries is around 30% to 50%. This range balances the need to minimize stress on the battery cells while stopping the battery from dropping to a damagingly low-rate stage throughout the storage.

How long do lithium ion batteries last?

Lithium-ion batteries can last from 300-15,000 full cycles. Partial discharges and recharges can extend battery life. Some equipment may require full discharge, but manufacturers usually use battery chemistries designed for high drain rates. How does storage/operating temperature impact lithium batteries?
