

Thailand glean energy

Does Thailand have a green energy plan?

"The Thai government's inclination towards clean energy initiatives, such as green electricity development, is commendable." Thailand's target of sourcing 30% of its electricity from renewable sources by 2030 aligns it with regional peers, albeit falling short of Vietnam's more ambitious goal of 50%.

Is Gulf Energy a good investment for Thailand?

As Thailand navigates its economic trajectory, Gulf Energy's investments in both clean energy and digital infrastructure may prove crucial in securing the kingdom's position as a regional leader in sustainable, technology-driven growth.

How important is Thailand's energy system?

Transforming Thailand's energy system is critical to meet Thailand's climate goals, as the energy sector accounted for 69% of Thailand's total GHG emissions in 2018, as well as broader development objectives, including access to affordable energy and job creation.

Why does Thailand rely on natural gas?

This positions Thailand favourably against other ASEAN nations such as Indonesia, where coal still generates 50% of electricity. Thailand's reliance on natural gas as a cleaner fuel source represents a strategic advantage in the region's energy landscape.

What is the power generating capacity in Thailand?

The total installed power generating capacity in Thailand is approximately 53 gigawatts as of December 2022, generated by EGAT, independent power producers (IPPs), small power producers (SPPs), very small power producers (VSPPs), and imports. Renewable energy capacity is around 23% of the total installed capacity.

How will Thailand meet its climate goals?

Thailand has adopted ambitious clean energy targets to meet its long-term climate goals, committing to reach carbon neutrality by 2050 and net zero greenhouse gas (GHG) emissions by 2065.

The agreement, formalized on June 4, 2024, during the Japan-Thailand Energy Policy Dialogue in Tokyo, supports Thailand's ambitious energy goals. The country aims to achieve carbon neutrality by 2050 and net-zero emissions by 2065, shifting towards cleaner energy solutions such as hydrogen co-firing in gas turbines.

Currently, clean energy accounts for 15-20% of Thailand's electricity production, around 16,000 megawatts. This positions Thailand favourably against other ASEAN nations such as Indonesia, where coal still generates 50% of electricity. Thailand's reliance on natural gas as a cleaner fuel source represents a strategic advantage in the region's ...
