What is a Liam F1 urban wind turbine?

Liam F1 Urban Wind Turbine The Rotterdam-based tech firm The Archimedes has introduced its Liam F1 Urban Wind Turbine, which is said to have an energy yield that is "80 percent of the maximum that is theoretically feasible." That's quite the assertion, given that most conventional wind turbines average around 25 to 50 percent.

How much energy does a Liam F1 generate?

As a result, the Liam F1 can consistently generate power regardless of the wind's direction or speed. With the ability to capture wind energy efficiently at wind speeds as low as 5 m/s, the Liam F1 produces approximately 1,500 kWh annually--enough to meet the energy needs of a typical urban home.

How big is a Liam F1?

Its diameter is just 1.5 meters, making it small enough to be mounted on most rooftops without the need for large, intrusive pole supports. For homes with even smaller roofs, the Mini version, measuring just 0.75 meters in diameter, offers even more installation flexibility. Despite its small size, the Liam F1 doesn't compromise on power.

How much wind does a Liam F1 produce a year?

higher, resulting in a shorter payback time. On average the LIAM F1 produces approximately 1433 to 1800 kWh annually (with an estimated average wind speed of 5.2 m/sec)*. As wind speeds depend on location and altitude, wind speeds at higher altitudes will be higher. The best way to estimate and calculate your personal payback time is

Why should you buy a Liam F1?

, the Liam is competitive with solar panels. Under perfect conditions the return on investment will be even higher, resulting in a shorter payback time. On average the LIAM F1 produces approximately 1433 to 1800 kWh annually (with an estimated average wind speed of 5.2 m/sec)*. As wind speeds depend on location and altitude, wind

What is a Liam turbine?

able are key words when describing the Liam. Over a decade of research led up to the development of this turbine and these spectacular results. Main characteristics of this innovative design are high efficiency, low cut-in wind speed creating the highest yield (W/m²)*, silent operation, insensitive to turbulence
