

Ukraine eskom solar households pricing changes

Will Eskom's radical electricity pricing changes affect solar power?

Eskom's proposals for radical electricity pricing changes would result in many households with lower consumption -- including those with solar power -- paying substantially more for electricity than they do now.

What changes will Eskom make to electricity charges?

Outlining significant changes to electricity charges that could impact residential, industrial, and municipal customers. Eskom aims to align electricity tariffs with the actual costs of generation, transmission, and distribution, ensuring customers only pay for the services they use.

Will Eskom continue charging for solar panels during cloudy days?

For solar panel users, Eskom plans to continue charging for electricity used from the grid during cloudy days or peak times. However, those who export excess energy back into the grid will receive energy credits, potentially reducing their overall electricity costs.

Did Eskom offer a tax rebate on new solar panels?

Several residential solar power users have written to MyBroadband and complained online about Eskom's proposed changes. They point out that at the height of load-shedding, government offered a tax rebate on new solar panels to help alleviate the devastating rotational power cuts.

How much does Eskom charge for connecting to the grid?

Eskom has proposed a 183% increase in the fees it charges some households for connecting to its grid. A calculator the power utility recently released shows that if Eskom's proposal is approved, customers on its Homepower 4 tariff plan will pay R637 per month before consuming a single kilowatt of electricity -- up from R225.

Will Eskom remove inclining block tariff?

Eskom proposes removing the inclining block tariff (IBT), which currently increases charges for households that use more electricity. The change will introduce a consistent pricing model for low-usage households, regardless of consumption patterns throughout the month, making bills more predictable.

South Africa's state-owned electricity company, Eskom, has applied to the National Energy Regulator of South Africa to approve a 36.1% electricity price hike from April 2025, a 11.8% price increase in 2026 and an 9.1% increase in 2027. Steven Mathetsa teaches and researches sustainable energy systems at the University of the Witwatersrand's African ...
