One of the objectives of battery management is the collection of sufficient accurate data to be able to anticipate the battery's health. The supply of back-up energy to the load must be guaranteed over the battery's whole working life time, therefore it is important to determine when the battery will need replacing to optimise the investment.

E Series VRLA gel battery! The long service life of the battery is guaranteed throughout the whole cycle (50% depth of discharge up to 1600 times) - it also exhibits excellent discharge resistance and can continue to discharge even after extended periods without power, making it very well suited to industrial applications.

What is a Battery? Batteries are similar to capacitors that offer a convenient way to convert chemical reactions into electrical energy. The electrical energy can then be used to produce light, heat or motion. Almost every electronic device runs on batteries. For example, TV remote, cell phones, flashlights, toys, or even our vehicles are powered by batteries.
