

Titanium quartz, with its mesmerizing rainbow sheen and vibrant energy, is a crystal that captures attention and sparks curiosity. Often called Flame Aura Quartz or Rainbow Aura Quartz, this man-made gemstone combines the ...

Solar energy is a highly beneficial and practical source that is typically used in taking advantage of its two main forms: heat and light. We use solar energy to charge vehicles, to generate power with photovoltaic (PV) cells ...

Fire, rapid burning of combustible material with the evolution of heat and usually accompanied by flame. It is one of the human race's essential tools, control of which helped start it on the path toward civilization. The original ...

Scolecite is one of those crystals that feels like a gentle hug from the universe. Its delicate, needle-like structure and soft, soothing energy make it a favorite among crystal enthusiasts, healers, and anyone seeking a moment of peace in a ...

Energy fuels our internal processes and regulates them. The protein is used to repair blood and tissue, and helps build muscles and is essential to maintain homeostasis. Energy is necessary to produce enzymes, ...

Uranium, radioactive chemical element of the actinoid series of the periodic table, atomic number 92. It is an important nuclear fuel. It is a dense, hard metallic element that is silvery white in color. It is ductile, malleable, and ...

Fossil fuel is a hydrocarbon-containing material of biological origin that can be burned for energy. Fossil fuels, which include coal, petroleum, and natural gas, supply the majority of all energy consumed in industrially ...

Who uses more energy in the world? China is the largest consumer of primary energy in the world, using some 157.65 exajoules in 2021. This is far more than was consumed by the United States, which ranks second. The ...

The IAEA is the world's centre for cooperation in the nuclear field, promoting the safe, secure and peaceful use of nuclear technology. It works in a wide range of areas including energy generation, health, food and agriculture ...

The energy mix varies between states and territories. Coal provided more than one-third of primary energy used in New South Wales, Victoria and Queensland in 2022-23, while natural gas provided more than half of

Uses of energy

primary ...

Energy can neither be created nor destroyed, but can only be transformed or transferred from one form to another. For example, solar cell panels do not create energy but harness solar energy and convert it into ...

Tidal power is a form of renewable energy in which the ocean's tidal action is converted to electric power. Tidal barrage power systems make use of the differences between high and low tides to generate electricity, whereas ...

Gamma ray, electromagnetic radiation of the shortest wavelength and highest energy. Gamma rays are produced in the disintegration of radioactive atomic nuclei and in the decay of certain subatomic particles. It includes some ...

Energy technology generates, converts, stores and distributes various forms of energy for use in a safe and economically responsible manner to improve the quality of life for people around the world. Examples of energy ...

Wind power is a form of energy conversion in which turbines convert the kinetic energy of wind into mechanical or electrical energy that can be used for power. Wind power is considered a form of renewable energy. ...
