

What is the future of energy in Vietnam?

Solar and wind power, onshore and offshore, continue to be encouraged and accelerated. Biomass energy, especially from wood pellets to drive the development of forest plantation and wood processing industries in Vietnam, is prioritized with the aim to reach 2.27 GW of power generation by 2030.

What are the main sources of electricity in Vietnam?

Coal-fired and hydropower plants are the two largest sources of electricity in Vietnam. Other energy sources providing electricity currently account for a small share, but their growth rates are increasing rapidly in line with the needs of the economy and the need to diversify the energy sector. 5.2. Fossil Energy (1) Coal

What is Vietnam's energy mix in 2023?

An analysis was conducted on Vietnam's energy mix in 2023, including the examination of power plant capacities and the volume of energy production from fossil sources (coal, gas, oil) and renewable sources (hydropower, solar energy, wind energy, biomass energy).

What is the Vietnam energy development plan VIII?

The Vietnam Energy Development Plan VIII aims to increase the share of solar energy in renewable sources to 25% within eight years. This initiative also intends to reduce reliance on imported coal energy, thereby providing greater opportunities for the country's solar energy market.

What does PDP8 mean for Vietnam's energy sector?

This decision marks a significant milestone in Vietnam's energy sector and provides an official endorsement for the long-awaited PDP8. Vietnam's new National Power Development Plan 8 (PDP8) sets ambitious targets for ensuring energy security, achieving a fair energy transition, and developing renewable energy industry and service ecosystems.

Can renewables help Vietnam meet its energy needs?

Renewables have the potential to become the lowest-cost option for Vietnam to meet its energy needs. Vietnam's power system is at an inflection point. Over the past five years, load has increased at an average of about 10 percent a year, a staggering pace.

Vietnam needs to unlock its renewable-energy development as quickly as possible to reach the government's commitment to net zero by 2050 and the bold PDP8 goals, which aim for wind, solar, and other renewable ...
