

Role of renewable energy Renewable energy is increasingly prominent in Europe's energy landscape. Countries are investing in wind farms, solar panels, and hydroelectric plants to reduce carbon emissions and combat ...

Poland is becoming a significant participant in the renewable energy transition in Central and Eastern Europe, with a goal of incorporating 23% renewable energy into its electricity mix by ...

The investment mission, recently held in Warsaw and Gdansk, was conducted in collaboration with the Polish Investment and Trade Agency (PAIH), the Philippine Embassy in Poland, and ...

US lithium-sulfur batteries developer Lyten has agreed to acquire troubled Swedish battery manufacturer Northvolt's battery energy storage system (BESS) manufacturing and research ...

In June 2025, Poland achieved a historic milestone as renewable energy sources (RES) produced 44.1% of the country's electricity, surpassing coal and lignite plants, which contributed 43.7%. ...

These efforts are partly driven by the European Union's renewable energy directives and Poland's commitment to reduce carbon emissions. Wind and solar power are at the forefront of these developments, with the country ...

The energy crisis ensuing from Russia's war in Ukraine, however, prompted Poland to accelerate the move away from coal and to increase renewables capacity. The government formed after the 2023 elections ...

In June 2025, Poland achieved a groundbreaking milestone in its energy sector, as renewable energy sources generated approximately 3,700 GWh, for the first time surpassing the 3,500 ...

The article's subject matter deals with the issue of renewable energy potential and the related issue of energy transition in Poland. The article presents an outline of the issues related to the ...

Europe Poland unveils major oil and gas discovery in Baltic Sea With an estimated 22 million tons of oil, 5 billion cubic meters of gas, Baltic Sea discovery could be major milestone for energy in ...

Poland currently has solar power plants with a capacity of 23 gigawatts (GW) and onshore wind farms with a capacity of only 11 GW. In autumn and winter, solar power plants produce little ...

Small hydropower plants are consistent with the assumptions regarding the development of distributed energy in Poland, including the development of national resources of renewable ...

Deregulation, which includes raising the concession threshold for RES installations, expanding the cable pooling mechanism, reducing the minimum distance of wind turbines from buildings, and ...

In a historic milestone for clean energy, solar power became the leading source of electricity in the EU for the first time in June 2025. New data from energy think tank Ember reveals that solar ...

The Member States in question have failed to fully transpose one EU directive related to defence, energy, transport, justice and health. The Commission is urging them to take immediate action to bring their laws in line with EU ...

Europe is complicated and even journalists from EU member states sometimes struggle to understand how climate and energy policy is made, and when institutions take key decisions. This timeline flags key European energy ...

Urgent action is needed to transform Europe's power system so that it is based fully on homegrown renewable energy. Once governments announce a coal phase out they then need ...

CEP Central European Petroleum has announced what it describes as "Poland's largest-ever oil and gas discovery" off the Baltic Coast. The discovery was made at the Wolin East 1 (WE1) ...

Renewable energy is increasingly prominent in Europe's energy landscape. Countries are investing in wind farms, solar panels, and hydroelectric plants to reduce carbon emissions and combat climate change.

The Poland renewable energy market has experienced robust growth driven by increasing government initiatives and favorable regulatory policies. The country's commitment to reducing ...
