IRENA's 1.5°C Scenario, set out in the World Energy Transitions Outlook, presents a pathway to achieve the 1.5°C target by 2050, positioning electrification and efficiency as key transition drivers, enabled by renewable energy, clean hydrogen and sustainable biomass.

How is global energy consumption changing year-to-year?. Demand for energy is growing across many countries in the world, as people get richer and populations increase. If this increased demand is not offset by improvements in energy efficiency elsewhere, then our global energy consumption will continue to grow
