Grid tied pv inverter with LCD display, can set main general parameters. The current THD at rated power and in the sine wave <3.5%.

If the grid-tie inverter is actually still functioning during a blackout, that's illegal and extremely dangerous. It looks like the magic happens through the extra box called the "Backup Gateway" which isolates the home from the grid during a blackout so that the PV+battery system can keep the house energised without violating anti-islanding.
