

Does Northvolt have a breakthrough in sodium ion battery technology?

Northvolt claims it has reached a breakthrough in sodium-ion battery technology, allowing it to reach up to 160 Wh/kg energy density. This means Northvolt's Na-ion chemistry is starting to overtake existing LFP cells for affordability and density.

What makes Northvolt a successful battery manufacturer?

The key to Northvolt's successful production breakthrough is the Prussian-White cathode material the company uses for its Na-ion battery. It is free from many of the problematic minerals -- including cobalt, lithium, graphite, and nickel -- associated with modern battery technologies.

Where are Northvolt batteries made?

Northvolt only produces nickel cobalt manganese (NCM) batteries at the moment. The cell is produced at Northvolt Ett gigafactory in northern Sweden. Later this year, Scania will open a new battery factory in Södertälje in Sweden, where battery cells will be assembled into battery packs to kickstart production of heavy-duty electric trucks.

Does Northvolt have a Na-ion battery?

Northvolt's Na-ion battery tech is cleaner, denser, and cheaper than competing chemistries. (Image source: Northvolt) Northvolt claims it has reached a breakthrough in sodium-ion battery technology, allowing it to reach up to 160 Wh/kg energy density.

When will Northvolt's battery factory be up & running?

The ambitious goal is to have the factory up and running by 2026. Sweden's Northvolt has based all of its battery production on producing lithium-ion batteries for a variety of industries including cars and energy storage companies like Polarium.

Does Northvolt use Na ion?

Northvolt also claims the Na-ion tech is safer at temperature than either NMC or LFP. The key to Northvolt's successful production breakthrough is the Prussian-White cathode material the company uses for its Na-ion battery.

en Europe, la soci&#233;t&#233; su&#233;doise Northvolt vient d'annoncer une avanc&#233;e technologique majeure qui pourrait changer l'industrie.

LFP batteries are rapidly becoming an important building block for the zero-emission society. ... Northvolt has just lost a supply contract with BMW worth \$2 billion because it has been unable to ...

After selling its first battery cells in 2022, Northvolt's losses tripled in 2023 to \$1.03 billion. The company tried to woo investors that year with plans for a stock-market listing at a \$20 ...

Eine Vereinbarung &#252;ber LFP-Belieferung hat der Weltmarktf&#252;hrer und Tesla-Partner CATL aus China jetzt auch mit dem Stellantis-Konzern getroffen, und diese Batterien sollen sogar in Europa entstehen. Der ...

Scania and Northvolt have jointly agreed to develop and commercialize battery cell technology for heavy commercial vehicles. Scania today announces that it is investing EUR 10 million in the partnership to enhance further development and support the establishment of Northvolt's demonstration line and research facility, Northvolt Labs.

Northvolt is building nickel manganese cobalt (NMC) battery cells primarily because of its higher energy density than lithium iron phosphate (LFP), as well as its greater recycling value. The European industry is making a big push on recycling as a way to increase - in the long-term - the proportion of raw materials it can source domestically.

According to the report, one of the standout developments over the past five years has been the rise of LFP batteries. Once a minor player, LFP now supplies over 40% of global EV demand by capacity as of 2023, a significant increase from its share in 2020. China largely drives this surge, where LFP batteries powered two-thirds of EV sales in 2023.

Two of these LFP battery systems are installed in the vehicle, giving an installed battery capacity of 338 kWh, of which 311 kWh is usable, according to the datasheet. This should allow a range of up to 250 kilometres. ...

"What we can do is compete on price with LFP (lithium-iron batteries) from China. And we're using a supply chain that's also something that already exists in Europe today," Enerpoly's \$8.4m grant brings the total raised to \$13.8m and gets them over the halfway line to build the factory, which has an estimated total cost of \$19m.

This advancement positions Northvolt's Na-ion batteries as a competitive alternative to traditional LFP cells in terms of cost and energy density. With major car brands like Toyota investing in solid-state batteries, Northvolt's ...

Northvolt is primarily known for its gigafactories which will manufacture lithium-ion battery and battery material, as well as recycling facilities. Image: Northvolt. Gigafactory company Northvolt and sodium-ion battery technology firm Altris have together revealed a battery with an energy density of 160 Wh/kg, designed for energy storage systems.

September 12, 2024: Recycling of lithium iron phosphate batteries will continue to remain unprofitable -- at least in the near term, according to Emma Nehrenheim, president of Northvolt Materials, speaking to the ICBR conference held this week in Basle, Switzerland.

Two of these LFP battery systems are installed in the vehicle, giving an installed battery capacity of 338 kWh, of which 311 kWh is usable, according to the datasheet. This should allow a range of up to 250 kilometres. The 2.4-tonne battery can be charged with up to 150 kW; a charging process from ten to 80 per cent should take 1.5 hours. ...

Nov 18 - Embattled green tech player Northvolt has missed some in-house targets and has curtailed production at its battery cells plant in northern Sweden, according to internal company documents ...
